## Kisa

### Description

Now you can become the griot in your family and record your stories. Tell the stories of your ancestors how you want, when you want all in one place. You can upload your family name or ancestor name. You can make your story public or keep in close to your heart and make it private. It's time to tell your story!

### Intended User

This is an app for those doing their genealogy. Age range 30-55. The older millennials, gen-xers and baby boomers.

### Features

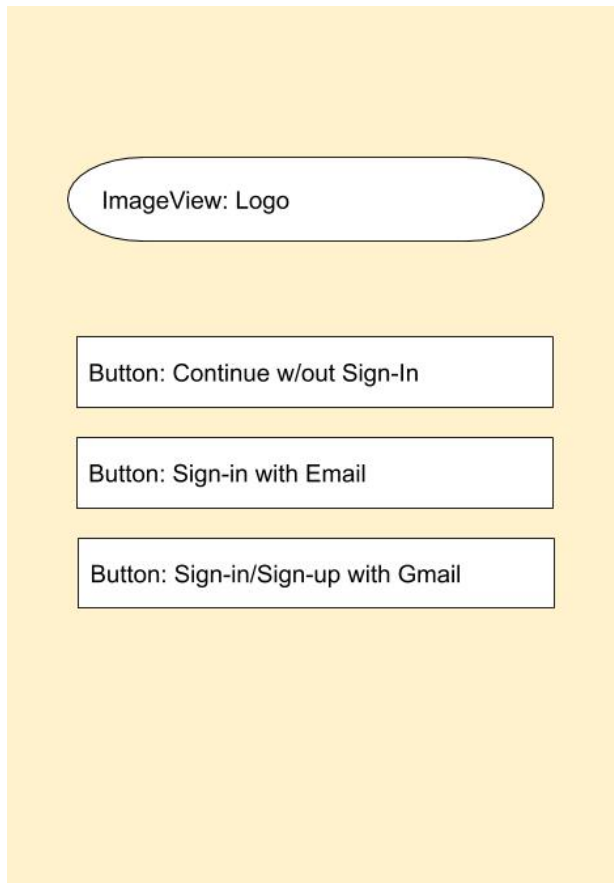

Main features of your app.

- Saves information
- Saves Audio
- Search by State
- Search by County/City
- Share to Facebook

- Records Audio using Media Recorder
- Make Audio Public or Private

## User Interface Mocks

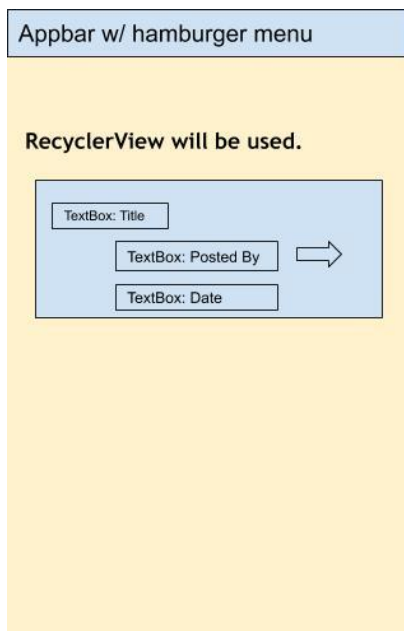

**Screen 1:** This will be the first screen of the app. This screen acts as a guide to want a user wants to do.

▶ **Screen 2: Welcome All Users:** This screen is the welcome screen for all users. Authenticated users will see a view account button.

**Screen 3: Browse All:** This screen allows a user to browse all public audio files.

**Screen 4: Search:** This screen allows a user to search public records based on certain criteria.

< AppBar w/ hamburger menu

TextView: Search Welcome

EditText: Ancestor Last Name

EditText: Family Name

EditText: State

EditText: City

EditText: County

**Screen 5: Working Audio Detail Screen:** This screen displays the details of audio files viewed by all users.

---

< AppBar w/ hamburger menu

Exoplayer

TextView: Posted By

TextView: Ancestor Name

TextView: Family Name

TextView: City, County, State

TextView: Date Posted

TextView: Email Member

**Screen 6: Authenticated User Main Activity:** This screen is the first screen a user will see when logged into their account.

Appbar w/ hamburger menu

TextBox

TextBox

Button: Record Audio

Button: View Saved Audio Files

Button: Edit User Details

This wireframe shows the layout for the Authenticated User Main Activity. It features a top appbar with a hamburger menu icon. Below the appbar are two text input fields. Further down are three buttons: 'Record Audio', 'View Saved Audio Files', and 'Edit User Details'.

**Screen 7: User Record Audio:** This screen provides the user an opportunity to record their audio file.

< Appbar w/ hamburger menu

Media Recorder

EditText: Posted By (Pre-set)

EditText: Ancestor Name

EditText: Family Name

EditText: City, County, State

EditText: Date Posted

EditText: Email Member

Radio Button: Public or Private

Button: Save

This wireframe shows the layout for the User Record Audio screen. It includes a top appbar with a back arrow and a hamburger menu icon. The main content area contains a 'Media Recorder' button, followed by seven text input fields for recording details: 'Posted By (Pre-set)', 'Ancestor Name', 'Family Name', 'City, County, State', 'Date Posted', and 'Email Member'. At the bottom, there is a radio button for 'Public or Private' and a 'Save' button.

**Screen 8: User View Saved Audio:** This screen provides the user an opportunity to view their saved audio files and edit them.

AppBar w/ hamburger menu

RecyclerView will be used.

TextView: Swipe to delete.

TextBox: Title

Button: Edit

TextBox: City

TextBox: Ancestor First Name

TextBox: County

TextBox: Ancestor Last Name

TextBox: State

TextBox: Family

**Screen 9: User Edit Audio Details:** This screen provides the user an opportunity to view their saved audio files and edit them.

< AppBar w/ hamburger menu

EditText: Title

EditText: Ancestor First Name

EditText: Ancestor Last Name

EditText: Family Name

EditText: City

EditText: County

EditText: State

RadioButton: Public or Private

Save

**Screen 10: User Edit Account Details:** This screen provides the user an opportunity to view and edit their account information.

< AppBar w/ hamburger menu

EditText: First Name

EditText: Last Name

EditText: City

EditText: State

EditText: Country

EditText: Phone

EditText: Email

EditText: Public Email

EditText: Public Username

Save

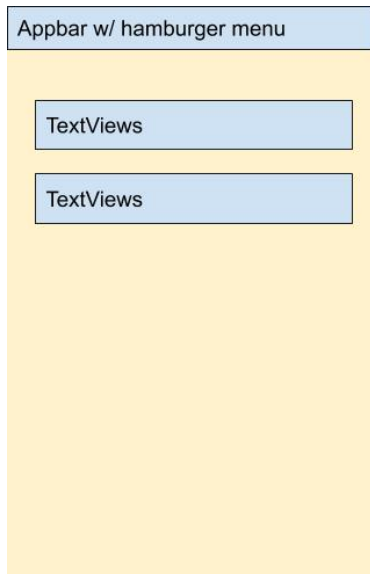

**Screen 11: About Us:** This screen tells the story behind Kisa.

AppBar w/ hamburger menu

TextViews

TextViews

**Screen 12: Help:** This screen gives help information for users.

**Screen 13: Widget:** This widget displays a user three favorite audio samples.

# Key Considerations

How will your app handle data persistence?

Firebase User Authentication, Firebase Storage, ROOM Database

Describe any libraries you'll be using and share your reasoning for including them.

Exoplayer for playing audio  
Picasso for images  
Espresso for Testing  
Firebase for User Authentication and Storage.

Describe how you will implement Google Play Services or other external services.

Google Play Services will be utilized for ads.

## Next Steps: Required Tasks

### Task 1: Project Setup

You may want to list the subtasks. For example:

- Configure Firebase User Authentication Library
- Configure Firebase Storage Library
- Configure Espresso Library
- Configure Picasso Library
- Configure Exoplayer Library
- Configure Room Library
- Configure RecyclerView Library

### Task 2: Implement UI for Each Activity and Fragment

Build basic user interface and layout.

- Build UI for MainActivity
- Build UI for WelcomeActivity
- Build UI for UserActivity
- Build UI for WorkingAudioActivity & Fragment
- Build UI for WorkingAudioDetailActivity & Fragment
- Build UI for UserWelcomeActivity
- Build UI for UserAudioActivity & Fragment
- Build UI for UserAudioDetailFragment & Fragment
- Build UI for UserProfileActivity

- Build UI for AboutUsActivity
- Build UI for HelpActivity
- Build UI for BrowseAllActivity
- Build UI for SearchActivity
- Build UI for UserSavedAudioActivity & Fragment
- Build UI for UserEditAccountDetails & Fragment

### **Task 3: Your Next Task**

Build ROOM Database. Use LiveData and ViewModel when required and no unnecessary calls to the database.

Describe the next task. List the subtasks. For example:

- Create Story Table (Variables: Title, City, County, State, UserId, Ancestor Firstname, Ancestor Last Name, Family Name, DateTime)
- Create Profile Table (Variables:UserId, First Name, Last Name, City, State, Country, Phone, Email)
- Create Privacy Table (UserId, Public, Private)
- Create Favorites Table(UserId, Favorite 1, Favorite 2, Favorite 3)

### **Task 4: Handle Audio Recording**

Set-up Media Recorder and Exoplayer. Retrieve URL from Media Recorder. Store List the subtasks.

### **Task 5: Set-Up Firebase**

Create Firebase User Authentication and Firebase Storage for Audios. For example:

- Create layout
- Something else

### **Task 6: Implement Search. Use AsyncTask.**

**Task 7: Create Widget: The widget will show the 3 most recent recordings of a user. Use Intent Service as a mediator.**

### **Task 8: Implement Admob**

**Task 9: Check debugging implementation. Implement debugging if not already implemented. Be sure all app validates all input from servers and users.**

**Task 10: Set-up proper Material Design. Use an app bar and associated toolbars.**

## Task 11: Implement Testing

---

### Submission Instructions

- After you've completed all the sections, download this document as a PDF [ File → Download as PDF ]
  - Make sure the PDF is named "**Capstone\_Stage1.pdf**"
- Submit the PDF as a zip or in a GitHub project repo using the project submission portal

If using GitHub:

- Create a new GitHub repo for the capstone. Name it "**Capstone Project**"
- Add this document to your repo. Make sure it's named "**Capstone\_Stage1.pdf**"
